Backbone Models Project

Create a Backbone collection for the **Vehicle** model you created in the last project.

Add the following cars inside the collection:

  * car1: { registrationNumber = "XLI887", colour = "Blue" }

  * car2: { registrationNumber = "ZNP123", colour = "Blue" }

  * car3: { registrationNumber = "XUV456", colour = "Gray" }

Find all the Blue cars and log them in the console.

Find the car with the registration number XLI887 and log it in the console.

Remove this car from the collection.

Convert the collection to a JSON object and log it in the console.

Iterate the collection and log each car in the console.
